Subject: RE: Data for Wedron
Date: Wednesday, July 31, 2013 4:24:00 PM

I received the following explanation for interpreting the IEPA data collected at the Hoxsey property:

The GP prefix is the boring location. The X prefix is for a soil sample from that location. The G prefix is for a groundwater sample from that location. For example, soil samples X-110 A, B & C are from GP-110. Groundwater sample G-110 is also from boring location GP-110. The numeric designations do not change to link one to each other. The exceptions to that are samples labeled X-158 and G-153 which are duplicate samples of X-108 and G-103. I merely add 50 to each to designate duplicate samples.

Subject: Re: Data for Wedron
Steve,

A few of us were at the USEPA offices last week and it was my understanding that Weston Solutions is involved with compiling a comprehensive summary of data collected by various parties. We would appreciate the Weston summary when available.

Data we have:

1. In early July you forwarded data sets for:
 - a. Benzene soil gas.
 - b. Groundwater Sampling results for WGW-GW01-052913 and for WGW-GW02-053013.
 - c. Stormwater Sampling results. We have certain results but no indication of location.
 - d. Monitoring well results for WGW-MW4-053013 and WGW-MW5-053013.
2. On July 24, you sent a summary excel spreadsheet adding MW 2, 3, 4, 5, 7 and 8 together with the lab data for all wells. I believe this data set correlates to the map Jacquie gave us on July 25.

Potential Gaps:

- a. Were there any other data results associated with the early July data set?

This might include:

- Any other metals or constituents in WGW-GW01-052913 and for WGW-GW02-053013?

There has been mention of Radium testing and we don't have those results. The results for these two sampling events were not included in the July 24 data set. Thus not sure if we have a complete set of what was tested in those sampling events at Wilbur Thompson well.

- Locations for the Stormwater Sampling results.

- b. IEPA data for Hoxsey. Last week, the USEPA indicated that the soil and groundwater results from IEPA sampling of Hoxsey would be provided, even though some apparent issues exist with the SVOC results. We don't have the IEPA data for Hoxsey.

- c. EPA data for properties along railway. This would include any soil or groundwater results at or near Illinois Railway, Grain Co., BP Amoco terminal.

- d. Groundwater potentiometric map. We have a map, but we should have the datasets that were used for the map if different from the survey dates and measurements we provided.

I am on vacation this week so please copy Dave Olchawa on any data being sent over.

We have a meeting together on Monday of next week so we will need some time to review the updated data set.

If we do not get the updated data soon, will be waisting time and money with all the legal and technical folks that are now attending these meetings.

Let me think of the roll-off dumpster and Frac tank request. Right now I would probably see if those things can be staged in the Wilbur Thompson Park, but let me think about it.

Mike,

What data do I still need to send your way. I am a bit distracted at the other job I am on and can send you what you are missing. I finally received the IEPA data and can send that your way if you don't have it yet.

Another question and update for you. We will be submitting the permits to drill the 8 replacement wells in the next week. We plan to begin installing the wells this fall after we bid out the drilling and award the contract. When we drill these wells we will be collecting the soil cuttings and development water for sampling and disposal. We will be disposing of the drums I have staged over at the scale house at the Technisand property. Can you check to see if we can get Fairmont Minerals to allow us to stage a couple of roll off boxes and a frac tank to collect the solids and liquids from the

drilling. We can place these on a tarp and sample pre and post activities to be sure there is no contamination when we leave. Let me know if this would be possible.

Thanks

Steve Faryan
